

Simplify

$$1) \quad \underline{12x} - \underline{3x^2} + \underline{4x} - \underline{5x^3} - \underline{x^2}$$

$$\boxed{-5x^3 - 4x^2 + 16x}$$

$$2) \quad \overset{17yx}{\cancel{17xy}} - 14yx + 3yx - \underline{xy^2}$$

$$\boxed{-xy^2 + 6yx}$$

$$2(3)$$

$$3(2)$$

Homework Questions?

Perimeter (add sides)

$$\underline{2x} + \underline{3x+1} + \underline{3x} = \textcircled{8x+1}$$

Area (use formula)

$$A = bh$$

$$(3x+2)(2x)$$

$$\textcircled{6x^2 + 4x}$$

$$A_{\Delta} = \frac{1}{2}bh$$

$$A_{\circ} = \pi r^2$$
